BENEFITS OF FLU VACCINATION

- Annual vaccination is still the best way to protect yourself, your family, and people vulnerable to serious flu illness (older adults, children under 4 years, pregnant women, and people with chronic health conditions).
- The flu vaccine may make your illness milder if you do get sick.
- Flu vaccination can reduce the risk of more serious flu outcomes, like hospitalizations.
- The CDC recommends everyone get a flu shot each year.

VACCINE INFO

- **Quadrivalent** (designed to protect against two influenza A and two influenza B viruses).
- **No latex or thimerosal.**
- The “high dose” flu vaccine (for people 65 and older) will not be available at this event.
- The flu vaccine has been modified by WHO (World Health Organization) for the 2018-2019 season.
- It takes approximately 2 weeks to build up immunity after getting a flu shot.
- You cannot get the flu from the vaccine.
